(An Autonomous Institution Affiliated to VTU)

1 / H Semester B. E. Regular / Supplementary Examinations August-2024

#### INTRODUCTION TO DRONE TECHNOLOGY

Time: 03 Hours

Maximum Marks: 100

Instructions to candidates:

1. Answer all questions from Part A. Part A questions should be answered in first three pages of the answer book only.

2. Answer FIVE full questions from Part B. In Part B question number 2 is compulsory. Answer any one full question from 3 and 4, 5 and 6, 7 and 8, 9 and 10.

PART-A

M BT CO

1		UAV's in India must comply with the regulatory guidelines issues by	01	1	1
	50000	The term refers to the unmanned aerial vehicle's ability to return to a predefined location autonomously.	01	2	2
	1.3	The classification of UAVs based on endurance includes categories such as	01	1	2
	1.4	The is the curved surface of the airfoil which helps in generating lift.	01	2	3
1	1.5	The condition beyond which the increased angle of attack lead to loss of lift is generally called as	01	1	3
1	1.6	MALE in the context of UAVs stands for	01	1	3
340	1.7	Define Aspect Ratio of a wing surface.	02	2	3
			VZ	-	
	1.8	The speed regime in which Mach number > 1 is called as	01	2	2
1	1.9	Electric UAVs usedtype of motors due to their	(C) Shi		
		efficiency and ease of control.	01	1	2
	1.10	The positive electrode in lithium-ion battery is usually made of			
			01	1	3
	1.11	UAV operational zones are categorized into zones,	10000	100	
	4444	each with specific flying regulations.	01	2	4
	3.30		110000000000000000000000000000000000000	2	1000
	1.12	Bypass ratio of Turbo engine is defined as	01	2	4
	1.13	The distance between the leading and trailing edge of an aerofoil is defined by	01	1	2
1	1.14	The longitudinal loads are carries by in a aircraft			
	( * 3. * ; * ( )	wing.	01	1	2
	1.15	The sensor measures the altitude of a UAV by	200		1500
4	1.13	detecting atmospheric pressure changes.	01	1	3
1	1.16	Cameras and sensors are critical for surveillance and data			
		collection missions are classified as type of			
V		payloads.	01	1	3
-	1.17				
		networks and mobile phones.	01	2	2
1	1.18			-	
1		μm wavelength range.	01	1	2
	1.19	The MEMS based magnetometer works on the principle of			-
1180			01	1	1

#### PART-B

	types of UAV based on range or endurance.	08	1	1
a	Classify various types of UAV based on range or endurance.  List down the drones used by India and its need with respect  List down the drones also explain the applications of drones			
ь	List down the drones used by India and its incomes to modern technology; also explain the applications of drones	-		C (85)
	to modern technology, also capital	08	2	2
	in India.			
	1 1 serofoil explain the			
-		- 1		
	terminologies, Also explain in brief, about NACA	08	2	2
		00	-	-
240	Compare the aerodynamic principles governing the flight of	00	2	3
b	fixed-wing UAVs versus rotary-wing UAVs.	08	hi.	8
1	fixed-wing UAVS Versus rotary ""-8			
-	OR			
40	OK.			
	f attack on forces acting on an			
a	Describe the effects of angle of attack on forces acting on an	08	2	3
	aerofil, and explain the concept of stall.			20
b	Describe the types of drag acting on a UAV by describing the	08	2	3
	variation in boundary layers associated with it.			
5 a	Describe the components and operation of a typical UAV	08	2	3
T SEE	and the second section with a propeller.	00		200
b	Describe the various types of batteries used in UAVS and then	08	2	14
	respective advantages.	UO	4	516
	A CONTRACTOR OF THE CONTRACTOR			
	OR			
6 a	Explain the role and working of solar power systems and solar	00	2	2
	with a neat figure explain the working parts of basic piston	08	2	2
ь	with a neat figure explain the working parts of basic piston			_
-	With a field figure in HAV	08	10	3
	engines and its applications in UAV.	08	1	3
	engines and its applications in UAV.	08	1	3
7 a	engines and its applications in UAV.		2	
7 a	Compare and contrast the advantages and disadvantages of	08	2	
	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of acrodynamic loads that act on	08		3
7 a	Compare and contrast the advantages and disadvantages of		2 2	3
7 a	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of acrodynamic loads that act on	08		3
7 a	Compare and contrast the advantages and disadvantages of using composites versus metals in <i>UAV</i> construction.  Describe the different types of aerodynamic loads that act on a <i>UAV</i> during flight and their impact on the <i>UAV</i> 's structure.	08		3
7 a	Compare and contrast the advantages and disadvantages of using composites versus metals in <i>UAV</i> construction.  Describe the different types of aerodynamic loads that act on a <i>UAV</i> during flight and their impact on the <i>UAV</i> 's structure.  OR	08		3
7 a	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of acrodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque	08		3
7 a	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.	08		3
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.	08	2	3
7 a	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of acrodynamic loads that act on a UAV during flight and their impact on the UAV's structure. 7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.	08	2	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.	08 08 08	2	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.  Differentiate between non-dispensable and dispensable payloads in UAVs and provide examples of each.	08 08 08	2 1	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.  Differentiate between non-dispensable and dispensable payloads in UAVs and provide examples of each.	08 08 08	2	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in <i>UAV</i> construction.  Describe the different types of aerodynamic loads that act on a <i>UAV</i> during flight and their impact on the <i>UAV</i> 's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a <i>UAV</i> .  Differentiate between non-dispensable and dispensable payloads in <i>UAV</i> s and provide examples of each.  Discuss the following with neat figures:	08 08 08	2 1	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.  Differentiate between non-dispensable and dispensable payloads in UAVs and provide examples of each.  Discuss the following with neat figures:  i) MEMS Barometer	08 08 08 08	2 1 2	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in <i>UAV</i> construction.  Describe the different types of aerodynamic loads that act on a <i>UAV</i> during flight and their impact on the <i>UAV</i> 's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a <i>UAV</i> .  Differentiate between non-dispensable and dispensable payloads in <i>UAV</i> s and provide examples of each.  Discuss the following with neat figures:	08 08 08	2 1	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.  Differentiate between non-dispensable and dispensable payloads in UAVs and provide examples of each.  Discuss the following with neat figures:  i) MEMS Barometer	08 08 08 08	2 1 2	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.  Differentiate between non-dispensable and dispensable payloads in UAVs and provide examples of each.  Discuss the following with neat figures:  i) MEMS Barometer  ii) MEMS Accelerometer	08 08 08 08	2 1 2	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.  Differentiate between non-dispensable and dispensable payloads in UAVs and provide examples of each.  Discuss the following with neat figures:  i) MEMS Barometer  ii) MEMS Accelerometer	08 08 08 06	2 1 2	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.  Differentiate between non-dispensable and dispensable payloads in UAVs and provide examples of each.  Discuss the following with neat figures:  i) MEMS Barometer  ii) MEMS Accelerometer  OR	08 08 08 06 10	2 1 2 2	3 4
7 a b	Compare and contrast the advantages and disadvantages of using composites versus metals in UAV construction.  Describe the different types of aerodynamic loads that act on a UAV during flight and their impact on the UAV's structure.  OR  Compare the parts of monocoque and semi-monocoque construction and explain why semi monocoque is advantageous.  Explain the considerations involved in selecting materials for different components of a UAV.  Differentiate between non-dispensable and dispensable payloads in UAVs and provide examples of each.  Discuss the following with neat figures:  i) MEMS Barometer  ii) MEMS Accelerometer  OR  Explain the concept of 'No Drone Zones' and provide example of areas where UAV operations are restricted.	08 08 08 06 10	2 1 2	3 3 3
