Mysore Road, RV Vidyaniketan Post, Bengaluru - 560059, Karnataka, India Department of Artificial Intelligence and Machine

Learning CONTINUOUS INTERNAL EVALUATION (CIE)

Course Code: AI125AIA

II SEMESTER - May 2024 CIE1
Course Title: Introduction to Python Programming

USN

Time: 90 min

Note: Answer all the Questions

Max. Marks: 50

| Q.N | Questions  | M     | co  | BT  |
|-----|--|-------|-----|-----|
| 1a  | Deliberate on "Python is cross-platform interpreter-based glue language".  | 10000 |     |     |
| 1b  | With a suitable example, discuss the use of triple quotes (single or double) and line  | 5     | CO1 | L1  |
| 2-  | continuation character ( ) in Python strings   | 5     | CO1 | L1  |
| 2a  | Use suitable arithmetic operators in Python to find and print the result for the following problems.  i) If each bottle needs 2 litters of syrup and there are 30 bottles, how much sugar syrup is needed to fill all of them, and how many drinks can be made from one bottle if each glass contains 200 ml of syrup?  ii) The total money earned by the company is Rs. 42425. The money is to be divided into 15 equal parts for partners. Find the total share of 3 partners. | 5     | C01 | L2  |
| 2b  | Apply the suitable string methods to do the following for the given String.  'Introduction to Python programming  i) Replace the word Python with Java Remove the spaces at the end of the string.  iii) Find the number of characters in the given string   | 5     | CO2 | L3  |
| 3a  | Accept the three sides of a triangle from the user and check whether a given triangle is equilateral, scalene, or isosceles triangle   | 5     | C03 | L2  |
| 3b  | Explain the working of break and continue statements with suitable examples  | 5     | C02 | L2  |
| 4a. | Demonstrate identity operators in Python with syntax and examples.   | 5     | CO2 | L   |
| 4b. | Write a Python program to find whether the given number is an Armstrong number or not.  Note: For example, 371 is an Armstrong number since 3**3 + 7**3 + 1**3 = 371  The sum of cubes of individual digits of the number should be the number itself.   | 5     | CO3 | L   |
| 5a. | Compute the average of numbers given by the user using a while loop. If the user gives input as "done or DONE" the control of execution comes out of the loop.   | 5     | COS | 3 L |
|     | Illustrate the use of any 5 Augmented Assignment Operators in Python   | 5     | CO  | 1 1 |

| Course | e Outcomes: After com                                     |                      |                       |            |            |             |  | problems      |            |        |

## Department of Artificial Intelligence and Machine Learning

Course Code: AI125AIA

Sem: II

Date:22/06/2024 Duration: 90 Minutes

#### CIE-II Introduction to Python Programming

| _ | No | Questions   | M | BT | CO |
|---|----|---|---|----|----|
| 1 | a) | Write a program that generates a specific series based on a given number using a for loop. The series should decrement to zero and then increment back to the given number. For example, if the input number is 5, the series should be: [5, 4, 3, 2, 1, 0, 1, 2, 3, 4, 5]. | 5 | 2  | 3  |
|   | b) | Illustrate any 5 String manuplation functions   | 5 | 2  | 1  |
| 2 | a) | Discuss the following 'tuple' operations with an example for each: i)concatenation. ii)iteration. iii)membership.   | 6 | 2  | 2  |
|   | b) | Define function along with syntax in Python   | 4 | 3  | 1  |
| 3 | a) | Differentiate between List and Dictionary   | 4 | 3  | 3  |
|   | b) | Consider the List B = [1,2,3,4,5], Perform the following operations i. Add value 12 ii. Remove the value 4 from the list. iii. find sum of all the elements in the list and add the sum at the end of the list  | 6 | 3  | 2  |
| 4 | a) | Write a Python program to remove specified keys from the given dictionary my_dict = {1: 'baz', 2: 'bar', 3: 'foo', 4: 'qux'}. The keys to remove are specified in the list, keys_to_remove = [1, 3].  Note: Do not use functions.   | 6 | 3  | 3  |
|   | b) | Write a Python program using the greet function that greets a person. If a name is provided, the program should greet the person using their name. If no name is provided, the program should use a default greeting.   | 4 | 3  | 1  |
| 5 | a) | Illustrate with an example the arbitrary arguments *args and keyword arguments **kwargs used in function  | 5 | 3  | 3  |
|   | b) | Write a python program to generate the prime numbers for a given number   | 5 | 3  | 3  |

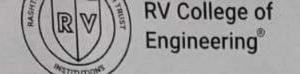

| Cours | e Outcome  |
|-------|--|
| CO1   | Apply fundamental knowledge of Python programming to solve the engineering problems  |
| CO2   | Identify the problems in various application domains and solve them using different concepts of Python programming   |
| CO3   | Design a solution using Python programming with societal, environmental, and other concerns by engaging in lifelong learning for emerging technology   |
| CO4   | Demonstrate the use of modern tools by exhibiting teamwork and effective communication skills  |
|       | The state of the s |

## Academic Year 2023-24 (EVEN Semester)

USN 1 R

#### Department of Artificial Intelligence and Machine Learning

Course Code:

: AI125AIA

Date: 03-07-2024

Semester

II

Time

10:30 - 12:00 PM

Max Marks

50

Duration: 90 mins

#### **Introduction to Python Programming** CIE 3 (Improvement CIE)

Note: Answer all the Questions

| SL. | No | Questions   | М  | BT | CC |
|-----|----|---|----|----|----|
| 1   | a  | Write a program to Create a text file called my_file.txt with some content, capitalize the first letter of every word, and print the content of the file in reverse order.  | 06 | 2  | 2  |
|     | b  | Write a Python program to handle a ZeroDivisionError exception when dividing a number by zero. (Hint: Take inputs from the user)  | 04 | 2  | 1  |
| 2   |    | What are the three types of access modifiers that limits access to the class members. Showcase three separate programs, each illustrating different access modifiers, by defining a class named 'Employee' with members {Empid, name, salary, designation}. | 10 | 3  | 2  |
| 3   | a  | Write a Python program to raise an exception by defining a function to check the age of a person. (Hint1: Accepting input as age and throwing an exception if age is less than 18. Hint 2: Use try block to catch the exception.)                           | 04 | 3  | 2  |
|     | b  | Write a Python program to create a class 'Student' with members {id, name, gender, branch, percentage}. Define appropriate member functions for reading and displaying the student's information.   | 06 | 3  | 1  |
| 4   | a  | Write a Python program to create a class 'Person' with members {firstname, lastname}. Create a child class inheriting from the parent class (Inheritance)   | 06 | 2  | 1  |
|     | b  | Define polymorphism. Write a Python program that overloads + operator, to add two objects of a class.   | 04 | 2  | 1  |
| 5   | a  | What is a Constructor? Discuss different types of Constructors.   | 05 | 1  | 1  |
|     | b  | Differentiate between class method and static method with suitable examples.  | 05 | 2  | 1  |

USN

# RV COLLEGE OF ENGINEERING®

(An Autonomous Institution Affiliated to VTU)

1/II Semester B. E. Regular / Supplementary Examinations Aug-2024

#### INTRODUCTION TO PYTHON PROGRAMMING Time: 03 Hours

Instructions to candidates:

Maximum Marks: 100

1. Answer all questions from Part A. Part A questions should be answered

1. Answer all questions from Part A. Part A. question first three pages of the answer book only.

2. Answer FIVE full questions from Part B. In Part B question number 2 & 2 and 4 5 and 6. 11 are compulsory. Answer any one full question from 3 and 4, 5 and 6, 7 and 8, 9 and 10, and 11 lab components (compulsory).

#### PART-A

M BT CO

|      |   | TAT         | DI | CO   |
|------|---|-------------|----|------|
| 1 1. | What is the output of the following snippet?  |             |    |      |
|      | T1 = (10, 20, [100, 200, 300], 30, 40, 50)  |             |    |      |
|      | T1[2][1] = "pyce"   | - 11- 1     |    | 1    |
|      | T1[2][1] = "RVCE"   |             |    | 1    |
| 9    | print(T1)   | 01          | 3  | 1    |
| 1.   | and the output of this code;  | 100000      | 7  | -    |
|      | a = "RV College of Engineering Bengaluru"   |             |    |      |
|      | print(a.lower())  | 01          | 4  | 1    |
| 1    | What is the output of the following snippet?  | 01          | 14 | 1    |
|      | a = int(input("Enter the Number:"))   |             |    |      |
|      | print(type(a))  | The same of | 1  | 1    |
| 1.   | What is the output of the following code?   | 01          | 4  | 1    |
|      | str = "ARTIFICIAL INTELLIGENCE"   |             |    |      |
|      | print(str[-5:-2])   | -           |    | -    |
| 1.5  | Consider the following sequence and predict the output. $l = [10, 20, 30, 40, 50, 60, 70, 90, 100]$ | 01          | 3  | 1    |
|      | l = [10, 20, 30, 40, 50, 60, 70, 80, 100]   |             |    |      |
|      | print(l[::2])   |             |    |      |
|      | print(l[1::2])  |             |    |      |
| 1.6  | Define typecasting in a   | 01          | 4  | 1    |
| (7)  | Define typecasting in Python.   | 01          |    | 1    |
| ~    | For the following snippet, write the output   | 01          | L  | 1    |
|      | " - (). Fromkeys(["Name", "Age", "Street"] None)  |             |    |      |
|      | print(a)  |             |    | 2,01 |
| 1.8  | Write an example for the Global variable.   | 01          | 3  | 1    |
| 1.9  | List the differences between rstrip() and later ()  | 01          | 1  | 1    |
| 1.10 | Wille the output for the following godes  | 01          | 1  | 2    |
|      | D = {1: "Mahesh", 2: "Suresh", 3: "Vignesh", 4: "Viresh", 5: "Vijay"}                               |             |    | 1    |
|      | if (3 in D):  |             |    |      |
|      |   |             |    |      |
|      | print(D[4])   | 01          | -  | 1 3  |
|      |   | 101         | 3  |      |

#### PART-B

| 2 | a<br>b | Discuss the primitive Data Types in Python with an example.  Illustrate the use of escape sequences with strings in python        | 07 | 1 | 1 |
|---|--------|---|----|---|---|
| - | -      | and list the advantages of it.  | 07 | 3 | 1 |
|   | a<br>b | Demonstrate if, if-elif, if-elif-else statements with an example.  Illustrate how to avoid Infinite Loops with a snippet and also | 07 | 3 | 1 |
|   |        | trace the program.  | 07 | 3 | 2 |
|   |        | OR  |    |   |   |

| 4   | 100    | Townstead Company  | 1              | 1   |         |
|-----|--------|--|----------------|-----|---------|
|     | a      | Summarize string manipulation functions for the string str = "RV College of Engineering." Using if-elif-else statements.   | 07             | 3   | 1       |
|     | b      | Consider a string "Engineer" and terminate a program when the interpreter gets a character 'i'. Demonstrate it using While loop.   |                | 3   | 1       |
| 5   | a<br>b | Illustrate break, continue, and pass statements.  Create a tuple and perform the following operations.  i) Adding the items into the tuple.  ii) Concatenating the tuple  iii) Iterating the tuple  iv) Deleting the tuple   | 07             | 3   | 1       |
|     |        | OR   | - 4            |     |         |
| 6 a |        | Write a program to perform all this of two matrices using  | 07             | 3   | 2       |
|     |        | lists.   | 07             | 3   | 1       |
| 7   | a<br>b | Discuss arbitrary keyword arguments and default values.  Illustrate the different modes of file with their syntax and  | 07             | 2   | 1       |
|     |        | perform the read and writing operation in files.   | 07             | 3   | 1       |
|     |        | OR   |                |     |         |
| 8   | a<br>b | Summarize Global variables and constants in Python.  Illustrate use of try, except and finally blocks in Python.   | 07<br>07       | 2 3 | 1       |
| 9 . | a<br>b | Illustrate the concept of encapsulation in Python.   |                |     |         |
|     | b      | Create a class called Vehicle with the constructor to initialize<br>the variable brand, model, and type. Also, create the<br>appropriate methods to alert the driver when the speed reaches<br>certain threshold.  | 07             | 3   | 1       |
|     |        | the variable brand, model, and type. Also, create the appropriate methods to alert the driver when the speed reaches   |                |     | 2       |
|     |        | Create a class called Vehicle with the constructor to initialize the variable brand, model, and type. Also, create the appropriate methods to alert the driver when the speed reaches certain threshold.  OR  Illustrate Function Polymorphism in Python.  Discuss the usage of Private, Public and Protected access |                |     | 1 2     |
| 0 a |        | Create a class called Vehicle with the constructor to initialize the variable brand, model, and type. Also, create the appropriate methods to alert the driver when the speed reaches certain threshold.  OR  Illustrate Function Polymorphism in Python.  | 07             | 3   | 1 1 1   |
| 0 a |        | Create a class called Vehicle with the constructor to initialize the variable brand, model, and type. Also, create the appropriate methods to alert the driver when the speed reaches certain threshold.  OR  Illustrate Function Polymorphism in Python.  Discuss the usage of Private, Public and Protected access | 07<br>07<br>07 | 3   | 1 1 1 2 |
